

Network Solutions

From big-picture thinking to the smallest details, CSPi Technology Solutions offers all the critical components for planning, designing, implementing and managing a successful network infrastructure.

Your network is the lifeblood of your enterprise, the layered infrastructure by which vital information is delivered throughout the organization.

While it's essential that your network is working properly right now, that's not enough. You need to be proactive about foreseeing potential problems that could keep it from functioning at peak efficiency in the future. It helps to have a partner working with you—with the engineering expertise and strategic insights to ensure you have the right networking infrastructure in place to accommodate long-term growth.

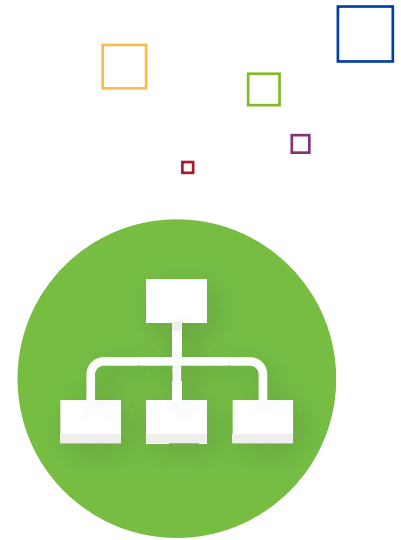

Our engineering excellence is your strategic advantage.

Our network solutions experts can assess and architect the right foundation to support your IT and business objectives. CSPi Technology Solutions has a proven track record of delivering reliable and scalable networking solutions for companies in a broad range of industries, including financial services and healthcare, where data accessibility is critical.

From advising you on network infrastructure and design, to delivering the right network technology for your infrastructure, to helping you manage and troubleshoot your network once it's fully implemented, CSPi Technology Solutions has the experience and technology resources to be your single-source provider. We also partner with the best networking product vendors in the business. And just as important for you, we make it a point to understand your specific industry and the particular demands it places on your IT infrastructure. That way, we can ensure an end-to-end, customized networking solution that delivers today and makes sense for tomorrow.

Network Infrastructure and Design

After a thorough assessment of your needs and goals—and a complete analysis of your current technology infrastructure—we look at all the necessary components related to the physical layer. Our goal? To integrate every aspect of your network efficiently and seamlessly.

KEY SOLUTIONS

- Network Assessments:**
 Our engineers have the ability to evaluate an existing network and analyze current performance bottlenecks as well as determine design challenges that are not in line with best practices.
- Design and Architecture:**
 Today's networks are constantly challenged by the demands of new applications and user demands. Our expertise allows us to work with our clients to design and architect the network to support today's needs and adopt to the future requirements.
- Network Optimization:**
 Whether it is optimizing your internal network, connecting multiple sites or connecting to the cloud, We have the expertise to assist our clients. By leveraging our partnerships and team, we can monitor and improve your network to ensure optimized reliability and performance.

We're engineers first and foremost, and know how to build intelligence and scalability into your network design. We can:

- Provide secured, unblocked connectivity to endpoints servicing internal employees, customers and partners.
- Deliver quality, real-time support for voice, video and multimedia applications on cohesive converged-network infrastructures.
- Ensure access and availability of information resources to those who are authorized—and denying access to those who aren't.
- Automate port provisioning and monitoring processes, preventing unauthorized network access.

Networking Technology and Implementation

CSPi Technology Solutions offers you the latest, most reliable networking technologies by staying constantly abreast of new developments. From local area network

(LAN) and wide area network (WAN) to IP networking to application delivery, we partner with the leading names in networking to ensure the best solutions for your requirements—technology that optimizes your efficiency and maximizes your return on investment.

Network Management

It goes without saying that any network downtime can impact your company's bottom line and put productivity and customer satisfaction at risk. In today's hyper-competitive business environment, we understand it's imperative for you to stay proactive when it comes to network management—to not only manage technical issues before they become business problems, but also to foresee any that might occur down the line you can take appropriate steps to prevent them.

Let CSPi Technology Solutions help you take appropriate steps to mitigate any downtime risk to your network.

CSPi Technology Solutions focuses on five core areas of technology. Along with Professional Services and Managed Services, we also work with our clients on solution architecture and project management.

It all starts with a conversation. To learn more about CSPi's technology solutions and how they can transform your IT challenges into a business advantage, contact us today at **(800) 940-1111** or us-ts-sales@cspi.com.
