**Transform your Communications Environment with Vital UCaaS**

In the snap of a finger, technology changes the landscape of business and turns ill-equipped companies into dust. The Goliaths dominate as they can afford to stay current with expensive and ever-changing technology. Leveraging the same tools used by these industry giants is a must for you to stay relevant. CSPi’s Vital Unified Communications as a service (UCaaS) is an equalizer, leveling the playing field to make it possible for David to do the unthinkable.

There is only upside to be gained when utilizing Vital UCaaS; its valued features and seamless functionality can completely enhance the communication that flows in and out of your business.

**At a Glance: You Enjoy**

- All the features and benefits of Cisco Unified communications Manager
- Disaster Recovery for continuous connections regardless of Mother Nature’s plan
- Enterprise class communications at an affordable price point. Flexibility: Purchase what you need when you need it
- Secure mobility and virtualization for anytime, anywhere communications across various devices
- Value and simplicity

**Increase Productivity**

Speed is the new currency of business, giving competitive rise to those who can quickly pull together, motion through major decisions, and bring new ideas to light. Vital UCaaS optimizes productivity by increasing real-time communication across services such as presence, mobility, unified messaging, and video conferencing.

**Is Your Company Mobile-ready?**

Your employees, from the Road Warriors to the Teleworkers to the Cross Functional Teams, are spread across different offices and time-zones, managing different projects and schedules. But what about the projects they have together? Vital UCaaS promotes convenient collaboration, alleviating the need for long travels to your company’s office while adding the ability to unite via video conference, saving both time and money.

**The Proof is in the Savings**

With the implementation of Vital UCaaS, a company with 100 employees can estimate a daily savings of 191 hours. At 49,660 hours per year, crossed with today’s average hourly pay rate, savings can breach 1.3 million dollars.

These projected savings, coupled with enhanced productivity and mobility, delivers a lasting return on your Vital UCaaS investment.

“Timely meetings used to be impossible. We would waste valuable time putting together the jigsaw puzzle of conflicting schedules. A virtual meeting anytime-anywhere gives us cat-like speed and agility.”

“Wanting to upgrade communication tools without in-house IT to implement and manage is a pain. CSPi affordable integration and management makes worrying a thing of the past.”

“Quality of life – I’ve spent years in traffic. Losing 20% of your day commuting isn’t fun. It doesn’t support healthy work vs life balance. Happier employees equate to employee loyalty and less turnover.”
**Flexible, Scalable Solutions**

It is not always optimal to rip and replace an entire system. Our technical consultants can work with you to determine a migration path that maps to your business needs.

**Technology Trend (BYOD)**

$367 billion by 2022

According to a Cisco Study, the BYOD market is on a constant up tick, jumping from $30 billion in 2014. While the majority of employees use personal devices for work related tasks, a lot of companies fear the install of BYOD supported software. With the invite of the Cloud comes the bad weather of security breaches. We plan carefully to place an umbrella of protection over your network infrastructure, so you and your employees can enjoy worry free communication growth.
