

The Affordable SOC for Every Organization

Safeguard Your Cloud Instances, Cloud Services, Applications and Remote Workers the Affordable Way!

SOC .vs. MSSP

Having an in-house security operations center (SOC) represents the pinnacle of cybersecurity protection. However building a SOC is complex and finding the right expertise is scarce and very expensive when you do. As a result, many organizations rely on a managed security services provider (MSSP) to outsource to. Unfortunately, MSSP's are only as good as its tools, processes, and the staff they have watching over your organization.

The Challenges with an MSSP

Often MSSPs use disparate tools to try and cover their customer's threat surface. The problem with this approach is that these tools are not integrated and require manual intervention from highly skilled security experts to operate. This is another big challenge as it very costly to obtain the right security expertise and maintain them on staff 24x7x365, to detect, and resolve issues as they occur. This model is not scalable nor affordable for most organizations. Not to mention ineffective, as one must be a superhuman to respond quickly to remediate the damage that can be caused by a fast-acting malicious threat. Even with a service level agreement (SLA), there is no guarantee that these attacks will be stopped within moments of detection.

Benefits

- **Reduce Risks** - 24x7x365 Threat Detection and Remediation powered by ARIA Cloud ADR.
- **Cost Savings** – for one flat rate, Vital™ MDR Services provides an entire team of experts and the features of ARIA™ CloudADR for less of the cost for one Security engineer.
- **Reduce IT Complexity** – stop threats with automation and less human intervention.
- **Improve Operational Efficiency** – mitigate attacks, intrusions, and breaches for a more secure and highly available network.
- **Assure Regulatory Compliance** - auto generates reports required to prove industry compliance.

The Vital™ MDR Advantage powered by ARIA™ CloudADR

With Vital™ MDR service Powered by ARIA™ CloudADR organizations can dramatically improve their overall security posture alleviating these challenges for one flat rate. CSPI Technology Solutions' Vital™ MDR service combines the expertise of our seasoned engineers with the ARIA™ CloudADR, a cloud based virtual SOC to provide around the clock protection from major attacks, intrusions, and breaches.

ARIA™ CloudADR is a fully automated SOC that leverages artificial intelligence (AI) and machine learning (ML) to find and validate threats and then contain them. Using a single pane of glass dashboard, our engineers can review containment recommendations to stop an attack with the push of a button from the same user interface (UI). Alternatively, the system can be configured to provide fully automated containment as threats are detected and stop them in their tracks limiting risk and potential damage.

With Vital™ MDR Powered by Aria™ CloudADR you can be confident your business is secured, as we offer tiered service level agreements (SLAs) that are measured in minutes, from threat detection through to containment. You get the benefits of a fully staffed SOC for a fraction of the cost.

Attack Types Detected

Intrusions

Compromised Credentials

Brute Force Attacks

Insider Threats

Malware

Data Exfiltrations

Ransomware

Policy Violations

DDoS Attacks

Key Features:

- **Comprehensive Visibility** – Sees threats originating from outside the organization as well as within.
- **Transparency** - Unlimited access to the same dashboards as analysts and automatic system notifications as confirmed threats are found, and actions are taken to contain them
- **Proactive Threat Detection** Proactively detects threats and attacks in real-time via ML-augmented built-in threat models.

Uses AI-automated event correlation, detection, verification of threats/attacks.

Finds and surfaces only confirmed attacks in minutes.

- **Automatic Real-Time Threat Containment** –Offers simple push-button containment of threats in real time.

Provides fully automated containment as threats are detected

- **Continuous Compliance Reporting** provides industry compliance with PCI, HIPPA, and NIST.

Cost effective solutions leads to significant ROI

- For one flat rate and less than the cost of a security engineer, you get our team of experts and a platform that out performs a costly disparate solution.
- Reduce risk and assured regulatory compliance.
- Keep all devices (even if infected) fully operational for minimized downtime to your business.
- Secure your cloud instance, services, application and remote workers

See how Vital™ MDR Services powered by Aria™ CloudADR platform can work for you. Take advantage of a complimentary, 30-minute cyber security posture review, which identifies key areas of risk and what you can do to mitigate them.
