

# Microsoft 365 Security in the Cloud

## Everything you need, wherever you need it, in one solution.

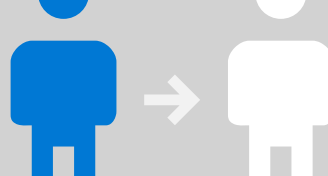

### Protect business data.

43%

of breaches take place at small businesses.<sup>1</sup>

It happens quickly. All it takes is one person to accidentally share sensitive information to someone outside the company.

### Double up on your security.

Never let another social security or credit card number leak outside your organization.

With **Microsoft 365**, you have full control over who has access to your data. You can encrypt sensitive emails to communicate securely with customers and apply restrictions so that documents cannot be forwarded or copied.

### Defend against threats.

120k is the average cost of a SMB data breach.<sup>2</sup>

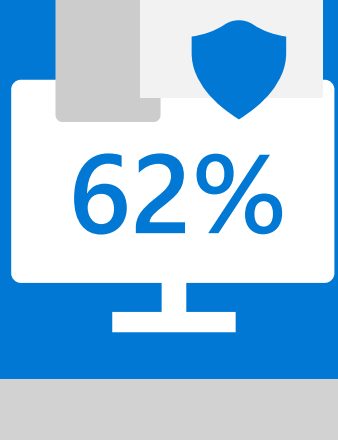

Cyberattacks are so sophisticated today that even experts can't detect them before it's too late.

### Never be a victim again.

Get protection from sophisticated cyberthreats hidden in email links and attachments and defend against phishing attacks.

Every day, Microsoft analyzes over **6.5 trillion** signals—the world's largest set of threat-related optics. It quickly detects malicious websites by scanning links in your emails and documents and lets you set up malware protection on your company's devices and files.

### Secure your devices.

62%

of companies lack the skills in-house to deal with security issues.<sup>3</sup>

More workers are using personal devices to access company files and email. What if the wrong person got their hands on this data?

### Control who has access.

Secure every phone, laptop, and tablet that connects to your company's applications.

With **Microsoft 365**, choose between having control over company-owned devices or manage how people access business apps on personal devices. You can also remotely wipe business data from lost or stolen devices without affecting personal information.
