

Digital Transformation Has Accelerated. Is Your Network Holding You Back?

Todi Hectivolik Holding Fod Back.

Digitization of supply chain and customer interactions has accelerated as businesses prepare for a post-COVID world, compelling executives to increase spending on IoT, cloud, and more.

58% of business interactions are digital, up from 36% in a pre-COVID 20191.

of mobile traffic is offloaded to Wi-Fi⁴, highlighting a surge in wireless dependence.

Yesterday's Networks Can't Handle Tomorrow's Demands

Networks will continue to play a pivotal role in delivering new digital experiences to customers, employees, and guests. But increased network complexity, aging hardware, a lackluster IT operator experience, and rising TCO will hinder businesses objectives.
